

In this service bulletin everything you need to know about the new software version 2.03 and our new cup lights.

As the existing cup lights are no longer available, all cup lights will be replaced with a new version. The new version features LED lights with a neutral white colour (Cool White). In addition to this, all new machines will be updated to software version 2.03 starting in September 2019.

Old version cup lights

New version cup lights

Replacement of cup lights on existing machines

In September we will complete the transfer to this new version. This means that no old cup lights will be kept in stock for service.

If the cup lights require replacement on an existing machine, these must be replaced on both

single unit.

Please note! When replacing the cup lights, the machine must be updated to software version 2.03!

Software adjustment to accommodate new cup lights

An adjustment to the software was required due to changes in the operating system of the cup lights. When replacing the cup lights, software version 2.03 or higher must be installed on the machine. (Check this by pressing *27* and checking the Display software)

This software version checks which type of cup lights are installed on the machine and automatically adjusts the operating system. Software version 2.03 can be installed on machines with old cup lights without any issues.

Option of displaying personal logo on Smart Touch

In software version 2.03, the option of displaying a personal logo has also been adjusted on the machines with a Smart Touch interface. With the new software, one logo may be uploaded with a larger size (max. 400x380 pixels). This logo is displayed on the start-up screen as well as on the lock screen.

For detailed instructions on uploading a logo with software version 2.03, see the “Uploading logo on Smart Touch” instructions. This can be downloaded via our dealer portal.

Old situation 380 x 136 pixels

New situation 400 x 380 pixels

Install new software

New software can be downloaded on our dealer portal. Instructions for the software update are also provided.

Summary:

- When replacing the cup lights on existing machines, both the left and the right cup lights must be replaced and the software must be updated to version 2.03.
- Software version 2.03 recognises the type of cup lights and can be used with both the new and the old cup lights.
- Upload larger logo on machines with a Smart Touch interface. See the “Uploading logo on

In addition to various minor bug fixes, the following changes were also implemented:

- Various text adjustments.
- Optimisation of EVA-DTS implementation.
- Waste container meter for ES Medium no longer maximised on default setting.

Please feel free to contact Michel Prinsen of Ron van Leest with any further questions via (0314) 442 333 or technicalsupport@etna-ct.com.
