ENERGY RATING COFFEE MACHINES

ETNA follows the energy protocol of the EVA (European Vending Association) and strives to achieve the highest possible energy rating.

We achieve this by equipping all ETNA coffee machines with an adjustable Energy Saving Mode, resulting in significant energy savings over their lifespan. Additionally, our open boilers, particularly those used in instant and fresh brew coffee machines, are well-insulated, minimizing heat loss.

Machine has rating A+ in accordance with the EVA Energy Measurement Protocol version 3.1B.
Machine has rating A+ at 15 liters/24 hours and consumes 780 wh/24 hours in Idle mode.
